Memory Game

Make some number cards, and write down the corresponding tables calculations onto cut-out card. Make sure the number cards and the tables calculation cards are different shapes so your child can distinguish a calculation from a potential answer. Lay all cards upside-down on the floor or desk. First your child has to turn over one of the table calculations cards, and then they need to find the number card that is the answer to the calculation. The winner is the player with the most cards once all the overturned cards are gone
